## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jay Lessler on February 24, 2010.

The application has been amended as follows:

Claim 1, line 9, replace "alkylenepolyoxy" with ---polyoxyalkylene---

Claim 11, line 2, replace "alkylenepolyoxy" with ---polyoxyalkylene---

2. The following is an examiner's statement of reasons for allowance:

The primary reason for allowance of claims 1, 6-15 and 20 is the inclusion of the limitation of the polymer being prepared from an ethylenic monomer having a connecting group with a valence of at least 3 which is substituted with at least 2 functional groups having an active halogen atom such as that represented in instant claim 7 by general formula (VI) or a possible resulting polymer as represented by that in instant claim 1 by general formula (IV), as it is present in all the claims which is not found in the prior art references, alone or in combination.

The closest prior art references are the following:

*Wang* (US 6,639,032)

*Oshawa et al.* (US 6,551,758)

*Simon* (Molecular parameters of hyperbranched polymers made by self-condensing vinyl polymerization of macroinimers. *Macromol. Theory Simul.* **2000**, 9, 621-627)

*Zhang et al.* (A Covalent-Chemistry Approach to Giant Macromolecules and Their Wetting Behavior on Solid Substrates. *Angew. Chem. Int. Ed.* **2004**, 43, pp. 5185-5188).

*Matyjaszewski et al.* (US 5,763,548)

*Wang* (US 6,639,032) teaches the monomers claimed as general formula (VI) (such as that shown in Sample 10 where there is only one Cl substituent per acetate group, as suggested in col. 7, ll. 67) represented in the figure below.

However, the instant invention claims a method of polymerizing the monomer requiring the living radical polymerization wherein the reactions at the

polymerization-initiation site (the Cl group) and the polymerizable unsaturated bond occur simultaneously. This is not the case with *Wang*, as evidenced by the reaction scheme shown in col. 15-20. The reaction at the polymerizable unsaturated bond appears to be performed separately.

Although these monomers are similar to those claimed in instant claim 1 by general formula (IV), it there does not appear to be a teaching or suggestion as to why one of ordinary skill in the art would change the allyl group shown in the above monomer to an acrylate group as would be required to obtain the hyperbranched polymer of instant claim 1.

*Oshawa et al.* teaches hyperbranched polymers prepared by the polymerization of the monomers represented by instant claims 7-8 (see the first two monomers in col. 15, when  $x=0$  and  $y=2-5$ ); however, *Oshawa et al.* teaches living anion polymerization rather than the living radical polymerization claimed in instant claim 7. The polymerization of *Oshawa et al.* also performs the reactions at the polymerization-initiation site (the Cl group) and the polymerizable unsaturated bond separately, rather than simultaneously as claimed by instant claim 7. *Oshawa et al.* also fails to teach monomers that would result in the multi-branched polymer claimed in instant claim 1.

*Simon* polymerizes monomers similar to those which would be necessary to obtain the polymer claimed in instant claim 1; however the monomers do not

contain a connecting group with a valence of at least 3 which is substituted with at least 2 functional groups having an active halogen atom, but rather only contain 1 functional group having an active halogen (see the monomer a, p. 622).

*Zhang et al.* discloses a multi-branched polymer prepared from the monomer, shown below, which is then polymerized.

However, the monomer only has a mono-oxyalkylene group (represented by the box) rather than the instantly claimed polyoxyalkylene group which are represented in the instant specification (see p. 15, ll. 15-18).

*Matyjaszewski et al.* teaches using monomers as claimed in instant claim 8 as initiators in a living radical polymerization (ATRP) to prepare block copolymers (such as polystyrene-polyacrylate copolymers) rather than the being polymerized into the multi-branched polymer that would result if using the method of instant claim 7. Therefore, it does appear as though the reactions at the polymerization-initiation site and the polymerizable unsaturated bond occur

simultaneously as required by the instant invention, nor would the initiator be incorporated into the polymer (as evidenced by Examples 1 and 2, col. 31-33).

The structures of the monomers and methods of polymerizing them of the prior art do not suggest or disclose the structural features of the claimed monomers or the resulting multi-branched polymers claimed by the instant invention, and is distinguishable over the prior art with incorporation of including a connecting group with a valence of at least 3 which is substituted with at least 2 functional groups having an active halogen atom a second acrylamide functionality to the carbohydrate derivative of the instant invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Briann R. Fink whose telephone number is (571)270-7344. The examiner can normally be reached on Monday through Friday, 7:00 AM to 4:30 PM (EST).
